

The Examination Questions in Surgery Practice.

1. Special instrumental methods of patient's examination in urgent surgery.
2. The indications and technique of pleural tapping (diagnostic thoracentesis).
3. The indications and technique of laparocentesis (abdominal paracentesis).
4. Differential diagnosis of acute appendicitis.
5. The main steps of appendectomy.
6. Peculiarities of the clinical course and treatment of appendicular infiltrate and periappendicular abscess.
7. The main steps of herniotomy.
8. Peculiarities of the operations in strangulated hernia.
9. Methods of breast examination.
10. Treatment methods of benign and malignant breast tumors.
11. Methods of patient's examination in thyroid diseases.
12. Methods of patient's examination and treatment of acute cholecystitis.
13. Differential diagnosis of acute cholecystitis.
14. Peculiarities of the clinical course and treatment of acute obturative cholecystitis.
15. The indications and types of cholegraphy.
16. The indications for cholecystotomy. The types of cholecystotomy.
17. Biliary ducts drainage. Indications. Types.
18. Special methods of patient's examination in diagnosing jaundice.
19. Diagnostic methods of acute pancreatitis.
20. The indications for laparoscopy in patients with acute pancreatitis.
21. The indications and methods of surgical treatment of acute pancreatitis.
22. Diagnostic methods of acute intestinal obstruction.
23. Peculiarities of the treatment in obturative and strangulated intestinal obstruction.
24. Special methods of patient's examination in perforating ulcer of the stomach and duodenum.

25. The main steps in the treatment of perforating ulcer of the stomach and duodenum.
26. Diagnostic methods and treatment of gastrointestinal bleedings.
27. Gastrostomy. Indications. Types.
28. Diagnostic methods and treatment of pulmonary abscess and pulmonary gangrene.
29. Methods of controlling bleeding (temporary and permanent hemostasis).
30. Diagnostics and treatment of abdominal abscesses.
31. The indications and technique of urinary bladder catheterization.
32. Surgical principles in pyogenic diseases of the soft tissues.
33. Examination methods in varicose veins of the lower limbs.
34. Diagnostic methods and treatment of acute thrombophlebitis of the lower limbs.
35. The indications for urgent operation on patients with acute thrombophlebitis of the lower limbs. The types of operations.
36. Diagnostic methods in occlusive arterial diseases of the lower limbs.
37. The indications and methods of surgical treatment in occlusive arterial diseases of the lower limbs.
38. Diagnostic methods of portal hypertension.
39. Arresting bleeding from varicose-dilated veins of the esophagus.
40. The main steps of surgery in general (diffuse) peritonitis.
41. Peritoneal lavage (dialysis). The indications and technique.
42. Principles of treatment for chemical burns and cicatricial constrictions of the esophagus.
43. Laparoscopic diagnostics of acute surgical diseases of the abdominal cavity.
44. The main rules of postoperative management (bandaging, taking out the stitches, wound monitoring, care, nutrition, prevention of complications) in acute surgical diseases of the abdominal cavity.
