## Thematic plan of seminars in the discipline Toxicological chemistry for students of the educational program specialist degree in the specialty of training 33.05.01 Pharmacy direction (profile) Pharmacy, form of study full-time (face to face) for the 2023-2024 academic year

| №  | Thematic blocks  | Hours (academic) |
|----|--|------------------|
|    | 7 semester   |                  |
| 1  | Safety precautions in the chemical-toxicological laboratory. Chemical-toxicological analysis. Legal and methodological foundations of chemical-toxicological analysis.   | 2                |
| 2  | Organization of forensic chemical examination in the Russian Federation. The main documents regulating the work in the field of forensic chemical examination.   | 2                |
| 3  | Classification of poisons. Classification of poisonings. Physicochemical characteristics of xenobiotics. Theories of toxicity. Stages of acute poisoning.  | 2                |
| 4  | General patterns of behavior of xenobiotics in the body. Receipt, distribution, withdrawal. Factors affecting the distribution of xenobiotics in the body. Toxicokinetics. Basic toxicokinetic parameters of distribution                    | 2                |
| 5  | Biotransformation of xenobiotics in the body. Factors affecting the metabolism of xenobiotics.   | 2                |
| 6  | Metabolites and toxicity. Lethal synthesis   | 2                |
| 7  | Posthumous changes. Basic reactions of secondary metabolism.   | 2                |
| 8  | Intermediate certification Control of knowledge, abilities, skills on the modular unit No. 1 "General issues of toxicological chemistry".  | 2                |
| 9  | Chemical-toxicological analysis for a group of substances isolated by mineralization. Preparation of biological samples for research. Isolation methods. Mineralization technique. denitration of mineralizate.                              | 2                |
| 10 | Solution of the practical problem of detecting "metal poisons" in the mineralizate. Preparation of mineralizate for research. Precipitation of barium sulfate and lead. Analysis of the precipitate for barium ions. Detection of lead ions. | 2                |
| 11 | Mastering the analytical methods of ion separation using dithizone as a chelating agent. Analysis of the filtrate for manganese, chromium, and silver ions.  | 2                |
| 12 | Analytical methods for the separation of metal ions using salts of diethyldithiocarbamic acid. Detection of zinc, cadmium, copper ions.  | 2                |
| 13 | Detection of antimony, bismuth and thallium ions.  | 2                |
| 14 | Research on arsenic. Writing an expert opinion.  | 2                |
| 15 | A private method for the detection and determination of the mercury ion. Organic compounds of mercury.   | 2                |
| 16 | Chemical-toxicological analysis of organic and inorganic fluorine compounds.   | 2                |
| 17 | Carbon monoxide. Methods of chemical-toxicological analysis. Spectrophotometric determination of carboxyhemoglobin in blood.   | 2                |

|          | Intermediate certification Control of knowledge, abilities, skills in  | 2             |
|----------|--|---------------|
| 18       | modular unit No. 2 "Particular issues of toxicological chemistry"  | -             |
|          | (Part 1). CTA of heavy metals, carbon monoxide, fluorine compounds   |               |
|          | 8 semester   |               |
| 1        | Safety precautions in the chemical-toxicological laboratory. Residual  | 1             |
| 1        | knowledge control.   | 1             |
|          | Chemical-toxicological analysis for a group of substances Isolated by distillation. "Flying" poisons. Features of isolation.   | 2             |
|          | Chemical-toxicological analysis of hydrocyanic acid derivatives.   | 2             |
|          | Chemical-toxicological analysis of alcohols (methyl, ethylene  | 2             |
| 2        | glycol, amyl alcohols)   | 2             |
|          | Examination of alcohol intoxication.   | 1             |
|          | Solution of the practical problem of detection of ethanol and higher   | 2             |
|          | alcohols in blood and urine by gas-liquid chromatography.  |               |
| 3        | Chemical-toxicological analysis for a group of substances,   | 2             |
|          | Isolated by extraction. Pesticides.  | 1             |
|          | Chemical toxicological analysis of organochlorine compounds.   | 1             |
|          | Chemical-toxicological analysis of DDT, HCCH, heptachlor.  | 2             |
| 4        | Chemical-toxicological analysis of organophosphorus compounds: thiophos, karbafos, chlorophos and other.                       | 2             |
|          | Chemical-toxicological analysis of carbamic acid derivatives.  | 1             |
|          | Chemical-toxicological analysis of synthetic pyrethroids.  | 2             |
|          | Intermediate certification Control of knowledge, abilities, skills in  |               |
| 5        | module unit No. 2 "Particular issues of toxicological chemistry" (part 2).   | 2             |
|          | CTA of volatile poisons.   |               |
|          | Intermediate certification Control of knowledge, abilities, skills in  | 2             |
|          | module unit No. 2 "Particular issues of toxicological chemistry" (part 3). CTA of pesticides.                                  | 2             |
|          | Chemical-toxicological analysis for a group of substances isolated by  |               |
| 6        | extraction and sorption.   | 2             |
|          | Isolation of medicinal substances - general methods of isolation.  | 1.5           |
|          | Isolation of medicinal substances – specific methods of isolation  | 1.5           |
| 7        | Chemical-toxicological analysis of barbituric acid derivatives.  | 1.5           |
|          | Toxicological significance, metabolism, objects of study, isolation.   | 1.5           |
|          | Chemical-toxicological analysis of barbituric acid derivatives.  | 2             |
|          | Identification, quantification, interpretation of results.   | <u> </u>      |
| 8        | Chemical-toxicological analysis of opium alkaloids (morphine,  | 1             |
|          | codeine, heroin, etc.).  Toxicological significance, metabolism, objects of study, isolation.                                  | 2             |
|          | Chemical-toxicological analysis of opium alkaloids (morphine, codeine,   |               |
|          | heroin, etc.). Identification, quantification, interpretation of results.  | 2             |
|          | Chemical-toxicological analysis of alkaloid derivatives of tropane and   |               |
| 9        | ecgonine. Toxicological significance, metabolism, objects of study,  | 2             |
|          | isolation.   |               |
|          | Chemical-toxicological analysis of alkaloid derivatives of tropane and   | 2             |
|          | ecgonine. Identification, quantification, interpretation of results.   |               |
| 10       | Solution of situational problems.  Chamical toxical analysis of natural phanylalkylemines                                      | $\frac{1}{2}$ |
| 10       | Chemical-toxicological analysis of natural phenylalkylamines.  Chemical-toxicological analysis of synthetic phenylalkylamines. | 2             |
|          | Identification, quantification, interpretation of results.   | 1             |
| <u> </u> | recommended, quantification, interpretation of festilis.   | 1             |

| 11 | Chemical-toxicological analysis of 1,4-benzodiazepine derivatives by hydrolysis products.   | 2   |
|----|---|-----|
|    | Chemical-toxicological analysis of 1,4-benzodiazepine derivatives by native substances.   | 2   |
|    | Solution of situational problems.   | 1   |
| 12 | Chemical-toxicological analysis of phenothiazine derivatives.   | 2   |
|    | Identification, quantification, interpretation of the results of phenothiazine derivatives.   | 2   |
|    | Solution of situational problems  | 1   |
| 13 | Chemical-toxicological analysis of cannabinoids. Analytical diagnosis of drug intoxication with cannabinoids.   | 2   |
|    | Synthetic analogues of morphine (promedol, tramal, methadone, fentanyl)   | 2   |
|    | Solution of situational problems  | 1   |
| 14 | Intermediate certification Control of knowledge, skills, skills in module unit No. 2 "Particular issues of toxicological chemistry" (part 4). CTA of poisons isolated by extraction and sorption. | 2   |
|    | Solution of situational problems  | 2   |
| 15 | Fundamentals of conducting a general (non-targeted) analysis of xenobiotics.  | 1   |
|    | TLC screening of xenobiotics.   | 2   |
|    | Immune methods for diagnosing acute poisoning and drug addiction.   | 2   |
| 16 | Analytical diagnosis of drug addiction and substance abuse.   | 1.5 |
|    | Features of the analysis and interpretation of the results of the study in the diagnosis of drug addiction and substance abuse.   | 1.5 |
|    | Analytical diagnosis of acute poisoning. Features of the analysis and interpretation of the results of the study during the analytical diagnosis of acute poisoning.                              | 2   |
|    | Total   | 113 |
|    |   |     |

Considered at the meeting of the department of Pharmaceutical and Toxicological Chemistry "27"  $05\ 2023$ , protocol No9

Head of the Department of Pharmaceutical and Toxicological Chemistry, Professor

/Ozerov A. A./
