1. To obtain a compatible system, two plastified blends of polyvinyl chloride (obtained under our own license) were used; their main characteristic is a high degree of plastification.
2. In conclusion, the best compatible supports for calf renal epithelial cells were the variants of compounds containing 20% collagen. Therefore, the

use of a certain amount of natural polymer (collagen) increases the biocompatibility of plastic masses used for medical devices.

3. In samples containing synthetic polymer- natural polymer mixtures no changes were noticed in cell appearance compared to the controls.
4. Biomedical polymers are compatible with living matter, having physical, chemical, and mechanical characteristics that ensure the accomplishment of either substitution, or stabilization of injured or malformed tissue functions. Biomaterials represent an extremely attractive subject of study for chemists, physicians, biologists, pharmacists and others.

а) Исходя из результатов эксперимента, можно сделать заключение, что объект имеет мягкую однородную структуру, свободно пропускает свет и может изменять ряд своих параметров при воздействии на него разности потенциалов в диапазоне от 5 до 33 000 В. Исследования также показали, что объект необратимо изменяет свою молекулярную структуру под воздействием температуры свыше 300 К. При механическом воздействии на объект с силой до 1000 Н видимых изменений в структуре не наблюдается.

б) Я, Иванов Иван Иванович, выражаю свои искреннюю благодарность сотрудникам компании ООО «Пример», в частности, Сидорову С.С. и Пупкову В.В. за высокий уровень качества обслуживания и оперативное урегулирование всех спорных моментов прямо на месте и прошу поощрить их в соответствии с условиями коллективного договора ООО «Пример».

в) Вы когда нибудь задумывались о том, что было бы, если бы Земля поменялась местами с Юпитером? Я серьезно! Возникли бы Новые Васюки на его кольцах? Конечно нет! Они же из газа! Неужели вы хоть на минуту купились на такую откровенную чушь? В жизни не поверю! А если бы луна упала в Тихий Океан, на сколько бы поднялся его уровень? Вы, наверное, думаете, что я – редкий зануда, но, если я не задам эти вопросы, то кто?

г) Согласно Гражданскому кодексу Российской Федерации, обществом с ограниченной ответственностью (далее – ООО) признается утвержденная одним или несколькими лицами коммерческая организация, уставный капитал которой разделен на доли, определенные учредительными документами. В отличие от акционерного общества, право на долю подтверждается не ценной бумагой, акцией, а лишь свидетельством, которое, в соответствии с уставом ООО, может выдаваться его участникам учредителям.

7. Разделите следующий текст на разделы, характерные для аннотации к научной статье на английском языке:

Effect of neurofeedback training (NFT) on cognitive function is inconclusive. The trainability of brain rhythm using a neurofeedback system is uncertainty because various experimental designs were used in previous studies. The aim of the study was to develop a portable wireless NFT system for alpha rhythm and to validate effect of the NFT system on memory with a sham-controlled group. The proposed system contained an EEG signal analysis device and a smartphone with wireless Bluetooth low-energy technology. Instantaneous 1-s EEG power and contiguous 5-min EEG power throughout the training were developed as feedback information. Participants were blinded and randomly assigned into either the control group receiving random 4-Hz power or Alpha group receiving 8–12-Hz power. Working memory and episodic memory were assessed. The portable neurofeedback system had advantages of a tiny size and long-term recording and demonstrated trainability of alpha rhythm in terms of significant increase of power and duration of 8–12 Hz. Our tiny portable device demonstrated success trainability of alpha rhythm and enhanced two kinds of memories. Neurofeedback – alpha rhythm – memory – wireless – Bluetooth

Three-dimensional polymer matrices offer researchers a new representation of the extracellular matrix that can be used to study the growth of cancer cells.

 SAMERENDER NAGAM HANUMANTHARAO AND SMITHA RAO /
 MICHIGAN TECH

Researchers at Michigan Tech have engineered synthetic versions of the extracellular matrix to study the growth of cancer cells, according to a report published on January 9 in *IEEE Open Journal of Engineering in Medicine and Biology*.

The scaffolds, which were created with an “electrospinner” that uses electric fields to weave matrices out of nano-fibers, come in three shapes: honeycomb, mesh, and aligned, in which the fibers are tightly packed similar to connective tissue. The authors ‘discovered that the triple-negative breast cancer cells preferred honeycomb scaffolds while adenocarcinoma cells favored mesh scaffolds and premalignant cells preferred the aligned scaffolds,’ according to a press release.

Co-author Smitha Rao says in the statement that this new technology can help researchers to study ‘how and why cancer cells metastasize. We can understand in a true 3D system why pre-metastatic cells become metastatic, and provide tools to other researchers to study signaling pathways that change between pre-malignant and malignant cells.’
